Acne Causes And Clinical Features

Causes. Four main factors cause acne: Excess oil production; Hair follicles clogged by oil and dead skin cells; Bacteria; Excess activity of a type of hormone (androgens) Acne typically appears on your face, forehead, chest, upper back and shoulders because these areas of skin have the most oil (sebaceous) glands. Hair follicles are connected to oil glands.

Acne - Symptoms and causes - Mayo Clinic

Clinical variants of acne (adapted from NHS Clinical Knowledge Summaries⁴) include: Acne conglobata — very severe acne where inflammatory lesions predominate and run together, often accompanied by exudate or bleeding. This form of acne can cause extensive scarring. Acne fulminans — sudden severe inflammatory reaction that

Acne causes and clinical features
