Biotechnology Genomics And Bioinformatics Biotechnology

Biotechnology combines disciplines like genetics, molecular biology, biochemistry, embryology and cell biology, which are in turn linked to practical disciplines like chemical engineering, information technology, and robotics. Bioinformatics is the application of information technology and computer science to the field of molecular biology.

genomics, and nutritional genomics. Genomics is an interdisciplinary field of science focusing on the structure, function, evolution, mapping, and editing of genomes. A genome is an organism's complete set of DNA, including all of its genes.

Applications of Bioinformatics in Medicine and Biotechnology

The Graduate Diploma in Biotechnology and Genomics is a graduate program which encompasses the study of genomics, proteomics, molecular genetics, protein biochemistry and bioinformatics. It provides students with knowledge of theories, quantitative methods, applications of biotechnology and bioinformatics that are pertinent to genomic analyses.

MORAFT welcomes you to attend the Global Conference on Biotechnology and Bioinformatics. GCBB -2021 scheduled on July 15-16, 2021 in Chicago, USA. This conference is specifically designed to bring subject matter professionals together to exchange and discuss current research findings in the field globally.

Global Conference on Biotechnology and Bioinformatics 2020

In particular, biotechnology is now the predominant technology underpinning the development of new pharmaceuticals and medical diagnostics and treatments. Genomics is the study of whole genomes (the entire genetic complement of an organism) and is focused on the structure and behavior of all the genes in an organism
