Facial Recognition verifies if two faces are same. The use of facial recognition is huge in security, bio-metrics, entertainment, personal safety, etc. The same python library face_recognition used for face detection can also be used for face recognition. Our testing showed it had good performance.

Theory of face detection classifiers A computer program that decides whether an image is a positive image (face image) or negative image (non-face image) is called a classifier. A classifier is trained on hundreds of thousands of face and non-face images to learn how to classify a new image correctly.

Face detection using OpenCV and Python: A beginner's guide ...

In this work we propose a simple yet effective face detector that combines several face/eye detectors that possess different characteristics. Specifically, we report an extensive study for combining face/eye detectors that results in a final system we call FED that combines three face detectors that extract regions of candidate faces from an image with two approaches for eye detection: the ...

Face detection in video and webcam with OpenCV and deep learning. Now that we have learned how to apply face detection with OpenCV to single images, let’s also apply face detection to videos, video streams, and webcams. Luckily for us, most of our code in the previous section on face detection with OpenCV in single images can be reused here!
