The use of GaAs MMICs (monolithic microwave integrated circuits) have proven their utility and high performance in hand-held global positioning satellite receivers; military field personnel, sailors, pilots, and other outdoorsmen stake their lives on such instruments. GaAs MMICs are ideal for these applications due to their high performance, and their capability to be utilized at low voltage and low power for portable applications requiring long battery life.

solutions in passive components and control devices, as well as integrated circuits based on them, continues today. Passive components are prevalent in RF and microwave integrated circuits. For example, it is estimated that in a single-mode telephone, passive components account for 90% of the component count, 80% of the size, and 70% of the ...

Passive RF & Microwave Integrated Circuits

Microwaves are bounded on the long wavelength side by radio waves and on the short wave length side by infrared waves. The relationship between wavelength and frequency is. $f\lambda = c = 3 \times 10^8 \text{ m/s}$ (1.1) where frequency/ f is in units of Hertz, wavelength λ is in meters, and c is the speed of light.

demonstrated. Conventional ceramic packages will have limitations due to ring resonance caused by stray electromagnetic waves. A new metallized multilayer ceramic package has been developed to reduce this electromagnetic induction effect. T

Monolithic Microwave Integrated Circuits - an overview ...

MMIC MSA-0686. Monolithic microwave integrated circuit, or MMIC (sometimes pronounced "mimic"), is a type of integrated circuit (IC) device that operates at microwave frequencies (300 MHz to 300 GHz). These devices typically perform functions such as microwave mixing, power amplification, low-noise amplification, and high-frequency switching.

Monolithic microwave integrated circuit - Wikipedia

A microwave integrated circuit (MIC) is an integrated circuit (IC) designed for operation at frequencies of approximately 1 gigahertz (GHz) or more. Such components are physically small, in some cases having less than one square millimeter (1 mm²) of surface area.
