Excel Spreadsheet to Calculate Instrument Reliability Estimates. I have created an Excel spreadsheet .xls to automatically calculate split-half reliability with Spearman-Brown adjustment, KR-20, KR-21, and Cronbach's alpha. The reliability estimates are incorrect if you have missing data. KRI-20 and KR-21 only work when data are entered as 0 and 1. Split-half and Cronbach's alpha work with Likert scale data as well (1, 2, 3, 4, 5, etc).

The beauty of this method is that you can expect to see a straight line when you plot the data in Column E vs. Column F.2 By performing a simple linear regression, you can obtain parameter estimates that will enable you to make inferences about Design A's reliability.³ First, be sure that the Analysis ToolPak Add-In is loaded into Excel.

A main difference between Weibull Analysis and Reliability Prediction analysis is that Weibull Analysis requires a sample set of life data from operational products. Reliability Predictions can be done at any time of the product lifecycle, including, and importantly, at the design phase before products have been manufactured.
